

STUDIO SCHEMES DE-MOUNTABLE STUDIOS
& Containerised Studios

Studio Schemes demountable studios are designed to the same high isolation and acoustic control standards as our normal studios – however they have been designed for installation within areas in which the disruption of normal studio construction is unacceptable such as working offices, public areas and for relatively short term requirements. for Radio, TV, Music,

Voice, etc

Be under no misapprehension these are not cheap flat pack studios that will not perform, The studio/s can be of any size or layout – they are pre-constructed in our factory using acoustic slot wall panels, isolated floor sections and heavy roof sections all of our own design,

The finished studio is then dismantled and delivered to site for quick , clean installation.

Electrics are included as is air conditioning or attenuated forced air systems again to our own design.

This system is currently used as voice booths within existing studios

Small TV head and shoulder studios with adjacent control rooms,

3 x radio studio set ups (see left)

Corporate radio interview studios with control rooms for use direct to national broadcasters.

Containerised Studios

Studio Schemes install isolated and acoustically treated studios in 20/30/40ft ISO containers for shipment worldwide

Typically a 30ft container can accommodate two studios with an central entrance lobby and racks area, two studio view windows and central heavy acoustic door.

The containers are manufactured in the UK with windows, acoustic doors and shielded cableways.

Studio Schemes install ducted air conditioning And technical cableways for the client to install the technical furniture.

The resulting units are suitable for transporting as self contained studios to any extreme in the world, be it desert or as shown for BFBS in Stanley – Falkland Islands
